

scotech 

Network cabling and more...

We offer...

- Reductions in login delays, network slow-downs and performance black-spots
- Resolution of existing network and wireless problems to reduce IT support
- Provision of support, advice and consultancy to your in-house IT support team on an ad-hoc or regular basis
- Strategic planning and implementation of cost effective IT budgets
- Relocating of Comms and Server Rooms
- Flexible Finance for Education

about us

We work with you and with a range of personnel including architects, surveyors, design consultants, and contractors.

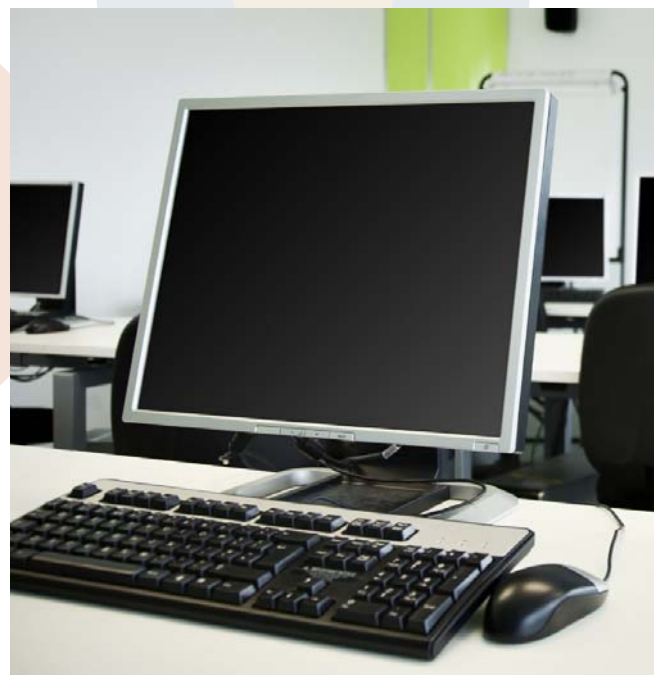

We are flexible in our approach to every installation.

We advise and assist with your decision making from the initial concept through to completion, which means you have an expert on hand throughout the installation process.

We source a range of manufacturer backed guaranteed products, ensuring that you maintain the freedom of choice to select the equipment and service which matches your budget.

Our clients benefit from our professional services as we deliver within the agreed budget and on time.

You have the option of subscribing to our maintenance service where we will continue to support you, thereby ensuring the relevance of your network and equipment. We guarantee you peace of mind when you select our products and services.

services

Scotech Cabling design and install cabling systems for your business.

Our clients benefit from our can do approach and extensive experience in the construction and IT industries. We know how to deal with problems such as slow working networks. We find a solution to suit our clients, as well as work within their budgets.

We provide a bespoke personalised service and take the time to meet with you to discuss precisely your desired outcome. We provide you with an assigned team of engineers who work on your project without constantly changing personnel.

Our services include voice, data and wireless networks as well as the installation of telephone systems. We use the highest calibre category 5e, 6, 7 and fibre optics products. We excel in the provision of additions, auditing and testing.

Scotech are also suppliers of IT equipment specialising in the provision of CCTV, projectors and smart boards to name a few products.

All installations are carried out in accordance with the highest industry standards by our trained engineers.

our strategy

It is essential to determine an organisation's long term strategy for it's IT requirements as far as possible in advance. We assist you advising on the approach you wish to take.

We provide structured cabling designed from the initial stages, taking any existing infrastructure and active equipment in to consideration.

We use a combined strategy of fibre optics, category 5e, upwards cabling and wireless access points to provide the best possible performance in every area of your organisation.

Our high performance active equipment is capable of handling the demands even at peak times. It is flexible, affordable and upgradeable.

We provide servers which are designed and built to handle the peaks in demand as well as having additional features for security and resilience to prevent unnecessary down time.

Our systems are expertly installed by qualified technicians experienced in working in office environments to minimise disruption and disturbance.

network design and data cabling

We design and install a cabling infrastructure to match your needs whether it is category 5e, category 6 or category 7.

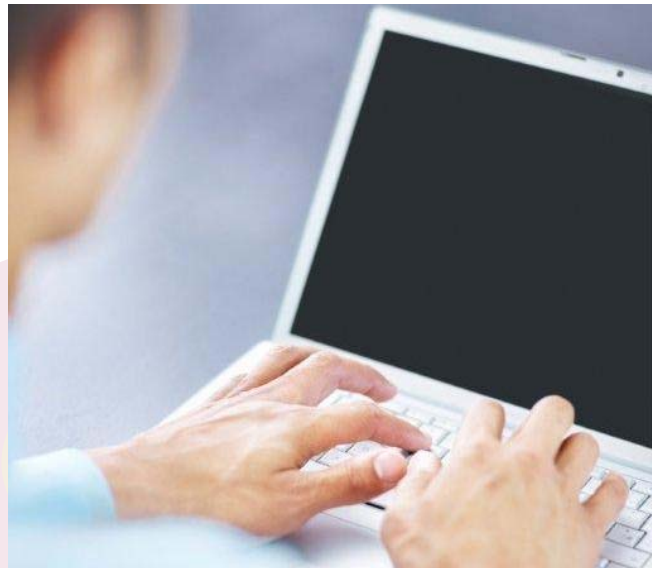

We work with you, guiding and supporting you in your decision making.

An audit is undertaken of your current structured cabling to assess its performance, capabilities and to determine how it can be adapted to meet your changing needs.

We assist you in making informed decisions, providing constructive advice to ensure that your network is designed for your current and future needs.

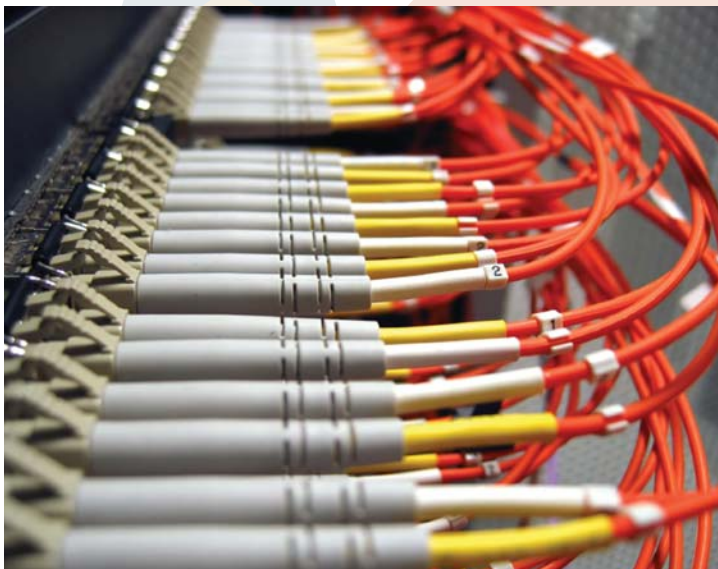

Our projects are brought in on time and on budget, yet with the flexibility to adapt to changes.

Our service includes assigning engineers to each project until it is completed without our clients having to deal with constantly changing personnel.

fibre optic cabling

Scotech advise you on the best solutions for inter-building links beyond standard connections using category 5e cabling, giving you greater choice and flexibility to achieve your aims.

Fibre optic cabling provides greater bandwidth than copper ensuring faster speeds at which data can travel. It has increased security and zero electromagnetic noise and interference which means it is more reliable.

Our networks are fully tested and backed by the manufactures warranty.

Scotech provide a range of services including:-

- Design and installation of networks
- Fault finding and diagnostics
- Maintenance
- Connections of single and multimode
- Fusion splicing
- OTDR testing

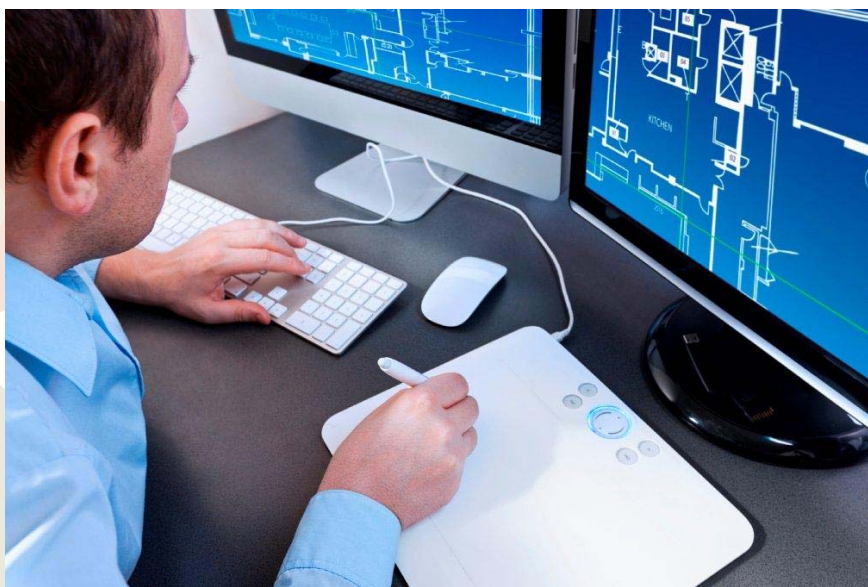

network design consultancy

We understand the difficulty of managing demanding network infrastructures on a limited budget. For that reason we have partnered with leasing providers to enable us to offer leasing on:-

- Servers
- Workstations
- Networking equipment
- Cabling infrastructure and installation

Once a strategy has been agreed, we implement a roadmap for IT infrastructure and guide IT spending over the coming years.

We continue to work with you regularly reviewing the strategy to advise on problems, changes, and additions to ensure the whole network is maintained at an optimum level in line with the IT strategy.

wireless site surveys & installation

Scotech has a wealth of experience in implementing wireless solutions.

We help you find the best solutions for your organisation.

Our assessment will encompass signal strength and security to ensure that your data is protected.

We advise on the system most suited to your environment.

We make clear the issues that may arise such as:-

- Available bandwidth
- Sources of interference
- Channel usage
- Affect on neighbouring wireless networks
- Re-planning after office refurbishment

We determine the optimum position and settings of every wireless access point in line with your specific locations requirements.

CCTV installations and maintenance

We enable you to monitor activity in your premises in real time to prevent crime or wrong doing.

We supply systems with digital technology which provides better images at a reduced cost, making the systems more affordable for your commercial and domestic purposes.

We advise on how cameras can be discreetly located where you need them most with the minimum impact to the aesthetics of your building or premises.

We take on existing systems.

If you are working with a limited budget we can also arrange for finance options to be put in place to assist you.

Scotech provide:-

- Traditional and IP CCTV systems
- Advice on design, installation and maintenance
- Commercial and domestic systems
- Door Access Control
- Remote View Systems

The systems we supply provide you with a cost effective efficient means of recording activities in areas of concern.

door entry access control

Scotech provides a range of Door Access Security units, preventing unauthorised personnel from gaining access to your buildings or secure areas. The equipment focuses on the element of prevention required to maintain your security.

You are given a choice of systems from simple to operate to complex structures which are tailored to your needs. The systems provided range from traditional keypads to biotechnology.

With the benefit of a maintenance service and product warranties you are guaranteed peace of mind.

The Door Entry Access Control Systems we supply provides security 24/7, 365 days per year.

Whatever your organisation needs, our units encompass every aspect of society such as schools, offices, hospitals, commerce and non commercial entities, as well as domestic dwellings.

AV installs including digital signage

Scotech assist you with every aspect of your decision to introduce Audio Visual (AV) equipment in to your organisation.

We have a wealth of experience in installing AV products. We install large screen technology, displayed through networked digital signage players, televisions, projectors, video, audio and computer data.

We also supply and install a wide range of products at competitive prices which includes interactive white boards, and visualisers to name a few.

In new builds we work with you and your design consultants, architects and main contractors to ensure that the planning stage is carefully mapped out to ensure the relevant cabling support structure is in place to facilitate the use of the AV technology.

For existing builds we are experienced in adapting existing designs to areas which will enhance the use of your current facilities and prolong its usefulness.

emergency callout

Scotech is experienced in responding quickly when a fault in a system occurs.

When faced with problems we know that you require quick solutions.

You receive a customised service to suit your budget. You will receive a response within 24 hours of your initial contact. An engineer will provide telephone guidance should you require this, alternatively we will attend your premises to assess any ongoing concerns.

Our services include fault finding, diagnostics, and maintenance. In an emergency we work to get your facilities functioning again quickly and effectively.

support services

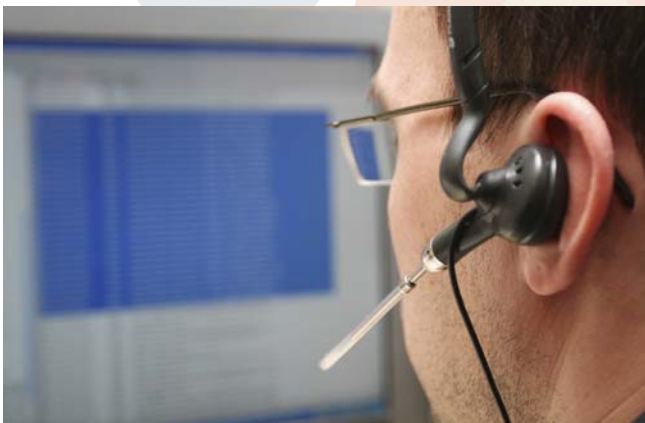

Maintain your system and have peace of mind by subscribing to Scotech's support package for your network.

Our services are for clients without an expert in-house IT team, as well as for those who seek additional expertise and input on a regular or ad hoc basis.

We provide quality, solutions, services and IT support.

We offer:-

- A personal service and customer care second to none
- Continuing support in areas from network planning to server configuration
- We specialise in building and maintaining Information Technology infrastructures
- We conform to accredited UK Standards
- Clients choose a support package that suits their needs and budget
- A clear strategy on what clients receive for their money
- Reliability and greater operational efficiency across our customer networks

network auditing

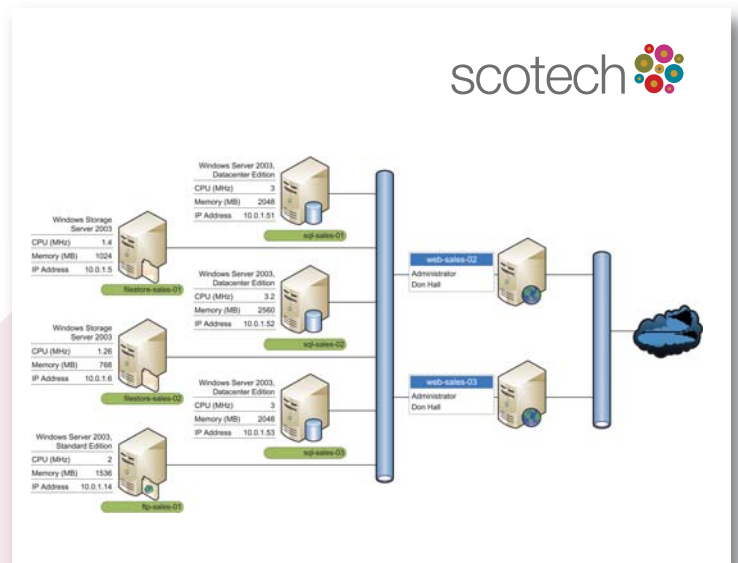

Scotech's experienced engineers visit your site to map, and document your network. This encompasses a detailed assessment of your servers, workstations, hardware, and port-to-port connectivity.

Every organisation needs to be aware of its current and maximum and minimum capabilities. We provide this in a cost-effective way, providing you with the ability to upgrade where possible to integrate new technologies within your existing structures.

Our services enable you to have a single, integrated view of your networks current abilities and its potential for the future, including server inventory information and network diagrams for audit and compliance-centric initiatives.

Our services enable you to redefine your infrastructure, hardware assets and port-to-port connectivity, this is particularly important if over a period of time there have been add ons as a result of mergers, office relocations, or corporate expansion.

Our services enable you to work within your current IT budget by maximizing your existing IT assets.

Client testimonial

testimonials

Scotech Cabling Solutions has demonstrated great commitment, enthusiasm and flexibility. The company undertook several projects over a very short time frame and always delivered an outstanding and professional service.

London Client

We have worked with the company on a regular basis for the last 4 years installing network infrastructure, Interactive Whiteboards and maintaining our multimedia projectors.

I recommend them to your organisation for the following reasons:

- *The prices are in line with competitors*
- *They work at times convenient to the school i.e. working from 6am – 8.30am. This means that we do not have to take corridors or classrooms out of use during the school day*
- *We see the same team of installers each time so staff are not having to re-explain the layout of our premises*
- *The team is highly professional and get along well with our staff*
- *The company does not get involved in 'hard selling' and is willing to be flexible. We sometimes alter our plans at short notice and the company is always able to accommodate our requests*
